

# Automated Remote Mobile Data Collection

PME provides secure, cost-effective access to critical data sets found on mobile devices through targeted remote collection.

## Current Challenges

- Custodian loses access to device during collection
- Trained techs sent on-site, or devices sent to tech
- Expensive, complex software
- Lack of control over what data gets collected
- Legacy methods slow time to discovery and increase cost
- Prohibitive collection costs require compromise on scope

Is your current collection method too costly and cumbersome?

## Example Use Cases:

- **Prosecution or Defense**
  - Civil or criminal litigation
  - Sexual harassment
  - Employee issues
- **Compliance & Regulatory**
  - Periodic compliance scans
  - Insider trading investigations
  - Corporate policy enforcement
- **Internal Investigation & IT Security**
  - Data breach investigation
  - Employee on/off boarding

## Benefits of the PME Solution

- Targeted remote collection for Android and iOS
- SMS/MMS, iMessage, Contacts, Call Logs, WhatsApp, Viber, WeChat, Line, media gallery, email, and more
- SaaS-based platform - No complex licensing or IT challenges
- Feature-rich, web-based review platform for end-to-end workflow or ECA/EDA
- Global data storage options for compliance needs
- Data is secured using strong encryption and data integrity is maintained through hashing

## PME Collect - Targeted Remote Discovery

- Automated remote collection
  - No collection kit
  - Custodian-led from anywhere, anytime
- Pre-filtering tools for targeted collection
  - Collect only the relevant data you require
  - Ensure custodian privacy
  - Save time and money during review process
- Collected data is available for immediate review and/or export
- Support tools for collection process monitoring

## PME Review - Collaborative Web-based Review

- Comprehensive case management
- Globally accessible from any web browser
- Powerful data review tools
  - Enrich data set with tagging, highlights, redactions and comments
  - Advanced search across applications, time range, contacts and other meta data
  - Save and share searches with users
- Deeper insights into custodian data with document OCR, audio and video transcription, and translation services
- Integrate to external review platforms via export or API
