Logikcull

Introducing Logikcull

Logikcull is a simple yet powerful end-to-end cloud-based investigations, eDiscovery, and records request management platform. The user-friendly interface simplifies data processing, searching, review, and productions. Easily organize and review electronically stored information for common use cases such as internal investigations and records requests.

"Logikcull is super user-friendly and everything just "makes sense. They are always innovating to make the platform even better, really listening to their users about what they want."

Amanda K - Legal Administrator of eDiscovery at American Electric Power

Key Logikcull Features

Logikcull is go-to solution that provides a simple, cost-effective, and secure way to manage investigations, eDiscovery, and records requests. Here are several key features of the platform:

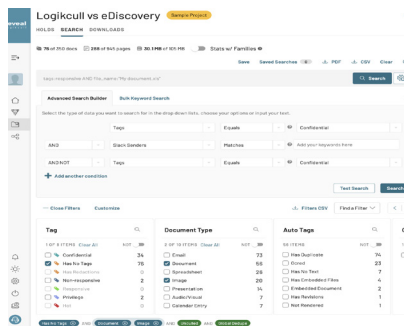

Explore Logikcull

The Industry's Most Preferred Investigations, eDiscovery, & Records Requests platform

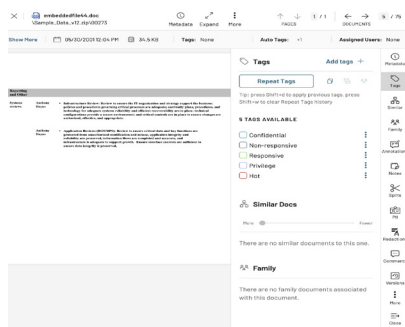

Data Integrations

Seamlessly connect and gather data directly from popular collaboration platforms like Google Vault, Slack, M365, and Box. Logikcull simplifies collecting data and managing personnel information by integrating directly with these platforms and your Active Directory.

Search & Filter

Streamline the challenging task of identifying critical documents for review, significantly reducing the time and effort involved. Logikcull offers advanced features like automated PII detection, voice-to-text translation, and sophisticated search capabilities, ensuring you can swiftly pinpoint the documents you need.

Review & Productions

Organize your document review and coding process with an intuitive interface designed to significantly reduce onboarding time for reviewers. Logikcull prioritizes efficiency and ease of use, featuring a powerful document viewer, automated tagging, and advanced text & audio redaction capabilities. Producing documents for third parties is as easy as creating a saved search. This approach significantly reduces document management complexity.

Logikcull Use Cases

Investigations

Simplify and streamline internal investigations with Logikcull—an affordable, user-friendly eDiscovery platform that empowers legal, HR, and compliance teams to handle sensitive cases efficiently, reduce costs, and ensure defensible discovery practices.

- Identify key evidence in HR, compliance, or corporate investigations.
- Quickly filter through emails, chats, and other modern data sources to find evidence of wrongdoing faster.
- Maintain secure and defensible audit trails of investigation events.

eDiscovery

Logikcull empowers in-house legal teams to navigate litigation challenges with ease by providing a secure, intuitive, and cost-effective eDiscovery platform. It streamlines compliance with complex regulations, reduces reliance on external vendors, and accelerates workflows through automation and powerful search capabilities.

- Quickly process, search, and review case documents.
- Automate legal holds and preserve data for collections.
- Reduce legal costs by managing your litigation matters in-house.

Records Requests (DSARs)

Logikcull can accelerate your DSAR workflows by streamlining the process of collecting, reviewing, and redacting personal data in response to GDPR, CCPA, and other privacy law requests risks in even the most demanding regulatory environments.

- Use keyword searches, metadata filters, and advanced Boolean queries to accurately identify relevant content. Automate legal holds and preserve data for collections.
- Automated PII Detection will identify sensitive data such as names, addresses, SSNs, financial details, etc.
- Bulk Redaction tools can be used to efficiently remove confidential information from multiple documents simultaneously.
